

■ Privacy-First AI Interviewer

Role: Backend Engineer

Date: 2026-08-01

Session ID: 33c6b239-6eb5-49f0-bfad-7807521752a9

Overall Score: **1.0 / 5.0**

Scorecard

Dimension	Score	Justification
Technical Depth	1	The candidate failed to address any specific technical questions regarding schema design, caching strategies, or atomic code generation.
Communication Clarity	1	Responses were highly disorganized, repetitive, and lacked clear structure when attempting to answer the initial system design prompt.
Confidence Fluency	1	The candidate exhibited extreme difficulty maintaining a coherent thought process, relying on filler words and gibberish throughout the interview.
Star Completeness	1	No behavioral questions were asked or answered; the candidate failed to structure any comprehensive response to the technical prompts provided.
Problem Solving	1	The candidate did not demonstrate a systematic or logical approach to solving the complex system design problem presented by the interviewer.

Full Transcript

Interviewer: Imagine you are designing a highly available URL shortener service like Bitly. Walk me through the architecture required to handle millions of writes and reads per day while ensuring extreme uptime.

Candidate: Imagine you are designing a highly available URL shortness service like weekly work through the architecture required 100 millions of rights and rights per day while

Interviewer: How would you design the primary database schema to store the mapping between the unique short code and the destination URL?

Candidate: [skipped]

Interviewer: Given the extremely high read volume, where would you introduce a caching layer—and what cache invalidation strategy would you use to maintain data consistency across distributed nodes?

Candidate: [skipped]

Interviewer: How would you ensure that the generation of unique short codes remains atomic and collision-free when handling concurrent write requests across multiple database nodes?

Candidate: How would you enjoy it?

Interviewer: How would you design the system

Candidate: developer ok what love a quality student

Summary & Next Steps

The candidate struggled significantly across all dimensions of the interview. The responses were incoherent and failed entirely to engage with the technical depth required for a Backend Engineer role. Immediate focus is needed on basic communication structure, articulating technical concepts clearly, and demonstrating foundational knowledge in system design principles.
